NES Light
CUSTOM LED SOLUTIONS

Since its establishment in 2002, NES Light has been concentrating on research and development in this cutting-edge technology and here you will find cost-effective and environment friendly lighting solutions (LED lamps use 80% to 90% less energy than the incandescent lamps they replace).
Our goal is to save our environment and provide low cost with high quality LEDs to our customers.
Also, we are ready for your custom applications.
All executives and employees of NES Light are proud of our products and promise you our best to fit your needs.
Our LEDs, - Low Voltage and electric currency product saves power more than 80% compare to Neon.

CNC Engraving & Cutting CNC Engraving means computer-controlled engraving.

In this process a text, logo or drawing that has to be engraved is sent from a computer to a milling machine which converts the digital information to engraving motions.
By means of milling this information is engraved into the material in the required depth.
This process can be applied to different materials and used for many different applications.

Custom L.G.P Light Guide Panel Output of light across the entire surface of the panel.

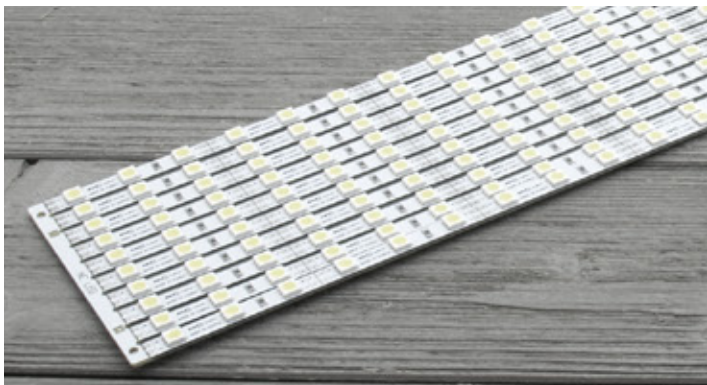

Unlike traditional light panels which have the light source mounted on the exterior of the LGP (Light Guide Plate), NES Light integrates high brightness LEDs and heat sinks into its exclusive 3D V-cutting LGP which makes it possible to produce "frameless", rectangular or custom shaped LED light panels for various application needs.
There are no limitations on what can be created with NES Light.
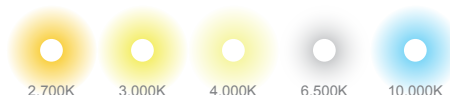

*WE CAN MAKE ANY SHAPE

EX.

Lumi Stick™ RS 1

· RS1 Series LED Lumi Stick
· Size: L=500mm(19-11/16") x W=6mm(1/4") x T= 5mm(3/16")
· 30Lamps/pcs
· 50cm x 10pcs = 5M/72Watt
· LED Type: L1(Pitch 13.3mm), 4.8watt/ft
· Cutting : 50mm
· Volt : 12vdc
· Lm : 450/Ft
· LED Color: White(2,700k, 3,000k, 4,000k, 6.500k, 10,000k)
